OVERVIEW

Ph.D. researcher specializing in computer architecture, hardware–software co-design, FPGA/SoC systems, chiplets, and heterogeneous accelerators. Experienced in FPGA prototyping, embedded firmware, C/C++ architecture simulation, and performance optimization. First-author publications at ACM ICS and GLSVLSI, with cross-institutional research collaborations.

EDUCATION

George Washington University, Washington, DC Aug 2023 – Dec 2027 (expected)
Ph.D. in Computer Engineering | *Advisor: Prof. Guru Prasadh Venkataramani*

Amirkabir University of Technology, Tehran, Iran 2019 – 2022
M.Sc. in Computer Architecture

NOTABLE PROJECTS

Swift-Healer: Firmware-Reconfigurable Self-Healing (ACM GLSVLSI 2026)
Implemented FPGA/SoC glitch resilience with GRU prediction (**F1 = 0.87**) and **5 μs–5 ms** recovery.
Languages: C/C++, Python | **Tools:** Vivado/Vitis HLS, AXI DMA | **Platform:** Zynq-7000
Link: Published Paper

Auto-Healer: Fault-Tolerant CNN Acceleration (ACM ICS 2025)
Implemented FPGA CNN recovery using DMR/checkpointing, achieving **40 ns** transient and **120 ns** permanent repair.
Language: VHDL | **Methods:** RTL, DMR, LeNet-5 | **Platform:** FPGA
Link: Published Paper

PIM and FPGA: Low-Latency Edge AI (IEEE Cloud Summit 2024)
Benchmarked LeNet-5 on PIM (**92**× CPU speedup) and FPGA (**0.02 ms** inference latency).
Language: VHDL | **Tools:** MNSIM, RTL | **Platforms:** FPGA, simulated PIM
Link: Published Paper

LPCR: Low-Power Network-on-Chip Links (IEEE TCAD 2025)
Reduced serial NoC switching by up to **13.2%** and link energy by up to **9.9%** through code reordering.
Methods: Information Theory, Huffman Coding, Low-Power NoC | **Platform:** Serial NoC Links
Link: Published Paper

FD-Hybrid: Chiplet-Aware Scheduling (IEEE Cloud Summit 2026)
Co-developed AoI-aware chiplet scheduling for freshness, latency, and deadlines; **Best Paper Award**.
Methods: AoI, Task Scheduling, Performance Modeling | **Platform:** Chiplet-Based Systems

LLMs on a Budget: Efficient Fine-Tuning (IEEE OJCS 2025)
Evaluated LoRA/BF16 and GPU power capping: **over 40%** memory savings; **5.55%** throughput loss at 300 W.
Language: Python | **Framework:** PyTorch, LoRA | **Platform:** NVIDIA RTX 4090
Link: Published Paper

MIPS Processor: RTL Design and ASIC Synthesis
Designed Verilog MIPS RTL and optimized ASIC synthesis using Synopsys Design Compiler and Cadence tools.
Language: Verilog | **Tools:** Design Compiler, SoC Encounter | **Platform:** ASIC
Link: GitHub Repository

CNN Implementation, Quantization, and Hardware Security
Implemented FPGA CNNs and PUF-secured LeNet-5 in VHDL, plus quantized CPU/GPU CNNs in Python.
Languages: VHDL, Python | **Methods:** CNN, Quantization, PUF | **Platforms:** FPGA, CPU, GPU

WORK EXPERIENCE

Graduate Research Assistant, George Washington University Aug 2023 – Present
Computer Architecture and Reliable Hardware Systems | Washington, DC

- **Improving chiplet-based architectures' performance through architectural optimizations**
- **Image Processing acceleration using FPGA/SOC and Hardware-Software Co-Design**
- **Reliability enhancement of Autonomous Driving Systems (ADS) using self-healing recovery mechanisms**

Submitted manuscript (IEEE TDSC): A. A. Malik, **A. Suvizi**, G. Venkataramani, and A. Aysu. *Emulated Integrity Replica: Enabling Self-Healing on FPGA SoCs via Hierarchical Twins*. Submitted to *IEEE Transactions on Dependable and Secure Computing*; arXiv preprint, 2026.

TECHNICAL SKILLS

Programming Languages: C, C++, Python, Java, Assembly, CUDA, OpenMP, MPI, Embedded ARM firmware.

AI Frameworks: PyTorch, TensorFlow, TensorFlow Lite, Scikit-learn, Pandas, SciPy.

Profiling/Simulation Tools: Intel Parallel Studio, Intel VTune Profiler, Intel Perf, NVIDIA Nsight, GEM5, SST Simulator, HP BYOD, MATLAB.

Hardware Design & EDA: FPGA, SoC, VHDL, Verilog, AMD Xilinx Vivado, AMD Xilinx Vitis HLS, ModelSim, Synopsys Design Compiler, SPICE.

HONORS AND PROFESSIONAL SERVICE

Honors:

- **Best Paper Award, IEEE Cloud Summit (2026)**
- **IEEE DAC** Conference Travel Grant (2026).
- **GWU** University Fellowship (2023, 2024, 2025, 2026)
- **gem5** Bootcamp Student Travel Grant (2024)
- Ranked 1st in the graduating M.Sc. class at Amirkabir University of Technology.

Peer reviewer: IEEE Micro; IEEE Computer Architecture Letters; IEEE Computer; IEEE Transactions on Sustainable Computing; IEEE Access; Journal of Hardware and Systems Security.
